

## Yeganeh Dorri Nokoorani

Yeganeh is a PhD student in Dr. Nika Shakiba's lab in the school of biomedical engineering at the University of British Columbia. She did her MSc in biomechanics at Sharif University of Technology. Her focus is on human pluripotent stem cells' (hPSCs) expansion and the genetically variants that emerge during this process. She tries to understand the mechanisms driving the emergence of these variants in the expansion process. Her project also aims for defining culture conditions in which the emergence of these variants is limited. Outside the lab, Yeganeh plays the Native American Flute, practices archery and watches movies.
